

Big Muddy Speaker Series:

Mitigating for Lost Habitat on the Missouri River

presentation by:

Kasey Whiteman

Missouri Department of Conservation

Over the past 100 hundred years the Missouri River has been highly altered which has resulted in the loss of naturally occurring side-channel chutes. In the late '90s and early 2000s the USACE started to mitigate for these losses by reconstructing chutes. Since then our knowledge of how to build chutes, how they are developing and the fish response has increased. Currently more mitigation efforts are slated to take place each year and research continues. In this presentation the past, present and future of these mitigated habitats will be discussed.

FREE & open to the public!

**Wednesday,
February 13**

**6:00 p.m. Social Hour
7:00 p.m. Presentation**
